

Strategic Approach to International Chemicals Management (SAICM)

Second session of the International Conference on Chemicals Management (ICCM),
Geneva, 11-15 May 2009

Technical briefings on emerging policy issues – Sunday 10 May 2009
From 9.30.a.m. to 1.p.m.

DRAFT PROGRAMME

The technical briefings have been organized to introduce the documents that will be before the second session of the Conference. The briefings will be conducted in English with interpretation into French and Spanish.

The objective of the briefings is to introduce each of the emerging policy issues selected for detailed consideration by Conference and to present how each issue meets the selection criteria for emerging issues and the rationale for the proposed actions requested of the Conference. A short summary of the preparatory work undertaken in preparation for the second Conference will also be presented to provide background to the secretariat proposal for a future procedure for emerging policy issues. The technical briefings will be supplemented during the week by side events organized by proponents of the issues. Further details of the side event programme are available on the draft timetable for the second session of the Conference ([Draft timetable for ICCM2](#)).

- | | |
|--|---|
| 1. Opening and Welcome | |
| 2. Overview and context for emerging policy issues considerations | |
